LEIF JENSEN AWARDED NOTUS DISTRIBUTION RIGHTS

Notus Electronics Ltd of Canada is pleased to announce that it has awarded distribution rights to Leif Jensen Grenaa ApS. Leif Jensen will service and sell the entire Notus product line of net monitoring equipment in Denmark, Sweden and Finland.

Leif Jensen Grenaa ApS

Leif Jensen is well known in the Scandinavian fishery. The company's management has been involved in many different aspects of the fishery from harvesting to ship building. Notus choose to work with Leif Jensen due to the trust the company has built with fishermen through its years of operation.

Leif Jensen holds a complete stock of equipment for fast service and sales. The major focus initially will be providing Notus's Trawlmaster solution to twin riggers. There has been much interest from the Danish fleet based on the success of Notus among UK twin riggers.

As well, there are already some Notus systems working very well on twin riggers in Denmark. These include vessels in Bornholm and Grenaa.

On a twin rig, the Notus Trawlmaster will monitor the spread on EACH net and measure all three trawl wires. From this, a center wire adjustment is calculated to align the clump and doors.
