NOTUS OPENS OFFICE IN VIGO

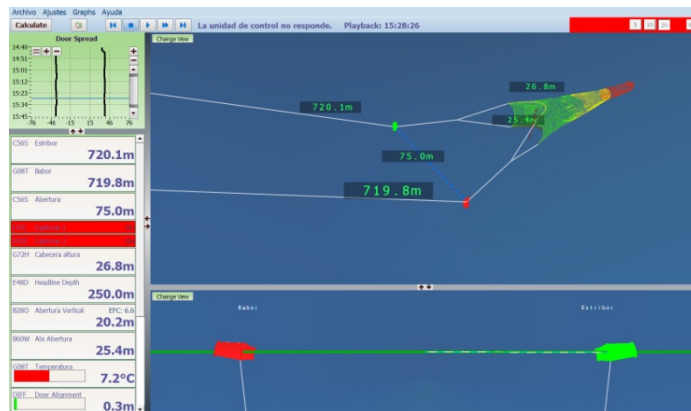

Notus Espana is a newly established subsidiary of Notus Electronics Ltd in Canada. Notus Espana, based in Vigo, services and supplies the complete line of Notus net monitoring systems for trawlers and seiners.

The new office provides complete sales and service to the Spanish fleet. Many Notus systems have been installed on vessels around the country and captains have been very impressed with Notus's capabilities. Notus Espana will build on this success.

Notus is the 3rd largest supplier in the world of complete net monitoring systems. The head office is in Canada and there is another subsidiary in the United Kingdom. More than 600 Notus net monitoring systems have been delivered.

The most interesting products for the Spanish fleet are the Seinemaster and Trawlmaster. The Seinemaster (for purse seiners) is a proven method to reduce gear damage and increase catch by monitoring the depth, sink rate and footgear location.

The Trawlmaster is a complete net monitoring solution for trawlers. A typical setup can monitor: doorspread, trawl warp lengths, door angle, headline height, depth, temperature and catch.

Now, more than ever, the fishing industry in Spain needs reliable technology to help reduce fuel costs and fine tune the fishing gear for optimal fishing. Notus Espana delivers this solution with fast and

affordable service and repairs completed in Vigo.
